## Charts

Figure 1: Population Growth, 1979-2013
Figure 2: Population Pyramid: Mid 2013 Population Estimates

## National Bureau of Statistics

1. The population of Seychelles is estimated at 89,949 persons as at $30^{\text {th }}$ June 2013. This represents an increase of 1,646 persons or an annual growth rate of $1.8 \%$ since $1^{\text {st }}$ July 2012. Table 1 shows the mid-year population estimates, vital events and rates for the period 1971-2013.
2. Table 2 a shows the components of population change for the period 2002-2013. During the period July 2012 to June 2013 an actual growth rate of $1.8 \%$ was recorded while the rate of natural increase (births less deaths) was $2.5 \%$. On a longer time scale, the population increased from 74,205 in 1994 to 89,949 in 2013 with an annual growth rate of $1.0 \%$ per annum. If migration is discounted, the rate of natural increase for that same period is $1.4 \%$ per annum which is the rate at which the Seychelles population would double in 54 years.
3. Table 3 presents the mid 2013 population by single years respectively. In 2013 there were 44,735 males and 45,214 females or an approximate ratio of 989 men for every 1000 women. The population pyramid (Figure 2) presents a graphic display of the mid-2013 population.
4. Table 4 shows the mid-year population estimates by broad age groups for the years 2008-2013. The proportion of persons of prime working age (20-44) has also decreased from $42.4 \%$ in 2008 to $39.1 \%$ in 2013. Conversely the proportion aged $45-64$ has increased from $18.9 \%$ in 2008 to $23.6 \%$ during that same period.
5. Table 5 indicates that the age dependency ratio has continuously declined from 689 in 1990 to 429 in 2013. The age-dependency ratio measures the number of persons of in the dependent age (under 15 and 65 years and above) to those in the economically productive age (15-64).

## BIRTHS

6. Table 6 shows the status of births in Seychelles since 2008. Of the 1,615 births between $1^{\text {st }}$ July 2012 and $30^{\text {th }}$ June 2013, 807 occurred in the second half of 2012 and 808 occurred in the first half of 2013.
7. The proportion of nuptial births has decreased from $20.9 \%$ in 2008 to $20.2 \%$ for the first six months of 2013, The proportion of acknowledged births (where the baby has been recognized by the father) has shown an increase from $60.9 \%$ in 2008 to $64.2 \%$ in the first six months of 2013, whilst the proportion of nonacknowledged births has decreased from $18.2 \%$ in 2008 to $15.6 \%$ in the first six months of 2013.
8. Table 7 shows that 121 ( $15 \%$ ) of all births in the first six months of 2013 occurred to women aged less than 20 years. This has increased from $14 \%$ recorded for the same period of 2012.
9. Table 8 shows that the districts with the highest number of births for the first six months of 2013 were English River (60), Anse Etoile (56) and Baie Sainte Anne (44).
10. Of the total number of births in each district, Les Mamelles recorded the highest percentage of births to teenagers (34\%), followed by Anse Boileau (28\%) and Baie Sainte Anne (25\%).

## DEATHS

11. There were 642 deaths registered in the period July 2012 to June 2013. Of these deaths, 306 occurred during the last six months of 2012 whilst 336 occurred in the first six months of 2013. (The number of deaths in Table 2 excludes deaths occurring to persons not on the NPD. Those persons are excluded from the calculation of the Population Estimates).
12. The total number of infant deaths (death to babies aged less than one year) for the same period was 15 . Of these, 5 occurred in the last six months of 2012 and 10 in the first half of 2013.

## MIGRATION

13. The net migration figure of (673) persons for the period July 2012 to June 2013 (Table2) was made up of 969 male in migrants and 296 female out migrants.

Table 1
